

FTI Consulting Builds Upon Reveal Partnership to Enhance E-Discovery Fact Finding and Quality Control

August 23, 2023 at 7:30 AM EDT

WASHINGTON, Aug. 23, 2023 (GLOBE NEWSWIRE) -- FTI Consulting, Inc. (NYSE: FCN) today announced that the firm's [Technology](#) segment has further expanded its existing partnership with Reveal, the global provider of a leading artificial intelligence-powered e-discovery, review and investigations platform.

In addition to existing global data hosting and early case assessment offerings with Reveal, FTI Technology now leverages an expanded suite of Reveal's sentiment analysis and custom multi-modal classification workflows. The addition of these features to FTI Technology's disputes and investigations offerings will enhance e-discovery processes with advanced artificial intelligence ("AI") capabilities and enable new workflows for validating document productions.

"Our team is continually innovating with emerging AI functionality to test and certify new methodologies that improve e-discovery outcomes and deliver benefits for our clients," said [Daryl Teshima](#), a Senior Managing Director within FTI Technology. "Reveal is a flexible platform that allows us to build and customize complex language models to deliver rich insights defensibly during fast-paced disputes and investigations. This latest enhancement of our partnership includes the creation of repeatable custom tools that enable clients to expedite discovery. We're also providing bespoke analytics that allow us to segment data in meaningful ways for early case assessment, fact finding and quality control."

Features and benefits of this enhancement include:

- Use of Reveal's language modeling and supervised classifiers to assist with downstream quality control by flagging documents that may have been missed and validating production sets for relevance and risk.
- The ability to effectively and defensibly leverage learnings from past matters to reduce data volumes and training for future matters through custom models for privilege, intellectual property, key documents, employment cases and other specific use cases.
- Layering of custom classifiers with pre-built sentiment analysis models to quickly find key documents and concepts.
- Custom algorithms that supplement and complement search to meaningfully segment documents for manual review, conceptual analysis, privilege or other categories.
- Efficient document prioritization and orientation to key issues within a data set to surface insights and issues for scenarios in which the underlying details are unclear (e.g., internal investigations and compliance matters).
- Multi-modal models to simultaneously layer and analyze documents according to content, metadata, association and other factors.

"Deepening our collaboration with FTI Consulting is an inevitable next step in our shared journey to reshape the art and science of fact-finding and quality control using artificial intelligence," said Wendell Jisa, founder & CEO of Reveal. "With partners like FTI Consulting, Reveal continues to blend the best AI technology with unmatched human expertise to transform outcomes for today's most influential global organizations."

In addition to the new features, FTI Technology leverages Reveal's powerful AI-enabled technologies to provide significant and defensible reduction of data volumes and fast insights during early case assessment. Global support for hosting, processing and review is also available across dozens of countries in Asia Pacific, Europe, Latin America and North America. FTI Technology's digital insights and risk management experts provide a broad range of consulting and services that help companies address critical areas of digital risk, including e-discovery, data privacy and information governance, compliance and risk and legal operations.
